

Let's take a look at making your own privacy shields . . .

Cutting science boards may seem to work!

- Science boards give you less than half the side protection of our 24" Computer Privacy Shield.
- Our 24" Jumbo is 4" wider (L to R).
- Our computer privacy shields have a cut-out in the back for wiring.
- You could cut yourself and have to miss work and fill out lots of paperwork.

Let's cut random grocery store boxes to make privacy shields.

- You'd have different sizes, shapes and colors in the classroom. Not a pretty site.
- Our privacy shields fold up and store in the provided boxes.
- It's hard to find boxes that are free from printing on the outside (must be for testing).
- Shield size and color consistency provide for a professional looking classroom.

For years teachers have been taping manila folders together to make privacy shields.

- Once together, the folders only provide an 8 ½" x 17" work space. Our 13" Desktop Privacy Shield provides a 17" x 20" work space. More than double!
- Laminating the folders for strength significantly adds to the cost and your time.
- Bottom line is they just don't stand up or last like our durable cardboard shields.

What about student safety?

- Our privacy shields have rounded corners to protect student bodies and eyes.
- Our privacy shields carry Two Million Dollars liability insurance.

Other things to think about

- Our special "V" score helps our privacy shields set flat so the sidewalls don't swing.
- On average, our privacy shields will arrive 5-7 days after you place your order.
- Time is money; Time for planning . . . time to get materials . . . assembly time . . . and most of all, time not spent doing what you were called to do . . . teach students.
